YOSTENA GIRMA ASEFA

SOFTWARE ENGINEERING STUDENT | FRONTEND • BACKEND • SOFTWARE TESTING

Addis Ababa University • Addis Ababa, Ethiopia

PROFESSIONAL SUMMARY

Fourth-year Software Engineering student at Addis Ababa University with hands-on experience in frontend and backend development, responsive user interfaces, microservices-based systems, API integration, and software quality assurance. Experienced in collaborating with developers and designers to build usable web features, test core workflows, and identify defects. Achieved second place with my team at the Cursor AI Hackathon by contributing to frontend development for PauseGuard, a fraud-detection system.

TECHNICAL SKILLS

Frontend	React.js, Next.js, JavaScript, TypeScript, HTML5, CSS3, responsive design, component-based UI
Backend & APIs	RESTful API integration, microservices concepts, frontend/backend collaboration
Testing & QA	Functional testing, production workflow testing, functionality validation, bug reporting and tracking

Project and Experience

Frontend Developer | Ethioreview | *Recent – Present (3 months)*

- Develop and maintain frontend interfaces for the Ethioreview platform.
- Build UI components and improve usability, page performance, and overall user experience.
- Collaborate with cross-functional teammates to integrate APIs and support reliable web functionality.

Software Engineering Intern | Tilla Health Insurance Trading PLC | *2 months*

- Contributed to backend development for the Tilla Cover core insurance project in a microservices-based environment.
- Collaborated with the software engineering team to understand system requirements and contribute to the implementation of backend features.
- Performed software testing to verify backend functionality, identify defects, and ensure that features behaved as expected.
- Gained practical experience in structuring backend services and understanding how microservices communicate to support a larger application.

Part-Time Frontend Developer | Toorax PLC (ProfileLink.et) | *6 months*

- Developed responsive frontend components and client-side features for ProfileLink.et.
- Worked with backend developers and UI/UX designers to turn requirements into functional web pages.
- Identified and fixed interface issues and improved cross-browser and mobile compatibility.

Software QA & Production Tester | Negade Mini ERP | *Portfolio project*

- Tested application functionality and production workflows across core business processes.
- Identified bottlenecks and defects, documented testing procedures, and supported stability improvements.

Fraud-Detection System - PauseGuard

- Collaborated with a team to develop PauseGuard, a behavior-based fraud detection system designed for digital applications, particularly mobile banking.
- Worked on a solution designed to identify potentially fraudulent activity by analyzing customer behavioral patterns and interactions, helping detect situations involving scam callers who may manipulate users into making fraudulent transactions.

ACHIEVEMENTS

PauseGuard — Fraud-Detection System | Cursor AI Hackathon | *Team project • 2nd place*

- Collaborated with a team to develop PauseGuard, a system designed to detect potentially fraudulent activity.

EDUCATION

Bachelor of Science in Software Engineering | Addis Ababa University, Ethiopia

Fourth-year student
